THIRTY-EIGHTH ANNUAL REPORT

OF THE

BOARD OF SUPERINTENDENCE OF THE DUBLIN HOSPITALS.

TO HIS EXCELLENCY THE RIGHT HON. GEORGE
HENRY, EARL CADOGAN, K.G.,

Lord Lieutenant-General and General Governor of Ireland.

35, Dawson-street,
5th May, 1896.

MAY IT PLEASE YOUR EXCELLENCY :

We have the honour to submit this our Thirty-eighth Annual Report on the City of Dublin Hospitals, under statute 19 and 20 Vic., cap. 110, entitled "The Dublin Hospitals Regulation Act," for Your Excellency's information, and subsequent presentation to Parliament.

During the year ending 31st March, 1896, we have inspected, as heretofore, without previous notice to the officials, the several Hospitals in this city which receive grants from Parliament.

These are :—

1. Westmorland Lock Hospital.
2. The House of Industry Hospitals, viz.:—
 - a. Hardwicke Fever Hospital.
 - b. Whitworth Medical Hospital.
 - c. Richmond Surgical Hospital.
3. Steevens's Hospital.
4. Meath Hospital and County Dublin Infirmary.
5. Cork-street Fever Hospital.
6. Rotunda Lying-in Hospital.
7. Coombe Lying-in Hospital.
8. St. Mark's Ophthalmic Hospital; and
9. Royal Hospital for Incurables, which receives a portion of the Concordatum Fund.

During the period under consideration no special circumstances were brought to the notice of the Board which called for particular inquiry into the working of any of these Institutions. One complaint was preferred at the Royal Hospital for Incurables, arising out of the adoption of new rules, which appeared to be unnecessarily stringent. We are glad to report that these have since been modified, and it is hoped that there may be no further cause for objection.

In view of the great importance which hygienic measures have assumed in regard to Hospital administration, we have made special inquiry on the occasion of our visits in each Hospital to determine whether due care were bestowed on cleanliness, drainage, and ventilation.

We endeavoured to impress on the authorities of each Hospital the necessity of allotting sufficient superficial space to each bed, and of causing the wards to be systematically emptied in rotation for thorough purification, so as to prevent the danger of gradual contamination.

In former Reports we directed attention to the importance of having special or invalid cooking, as essential to promote recovery in particular cases. We regret to observe that scarcely sufficient care is bestowed on this subject, which, in many cases, is more important than the administration of medicine. We recognise the fact that in a large Institution it must always be difficult to differentiate between the food requirements of individual cases, and still more difficult to make provision for varied diets; yet, it will be admitted, that no general dietary, however excellent, can be suitable for special cases, and we submit that a closer regard for this fact would be greatly to the advantage of the sick poor.

We have also urged on those who attend Lying-in patients the imperative duty to ever bear in mind the danger of their becoming agents of disseminating disease.

We laid stress on the necessity of providing available means in each Hospital for the extinction of an outbreak of fire, and other matters which concerned the well-being and safety of the patients.

We have already referred in previous Reports to most of these subjects, and while we think it necessary to reiterate the views which we have expressed, we do not propose in this Report to enter into these subjects in detail.

Within the last few years large sums have been expended on new buildings and on sanitary arrangements, and considerable improvements have been effected generally; but during that period no more beneficial improvement has made greater advance, or become more important and useful, than the good and skilful nursing of the patients. We have made many suggestions to the administrators of our Hospitals on these subjects, and we have to acknowledge the readiness with which our recommendations have been considered, and as far as possible complied with. We are, therefore, gratified to be able to testify to the general efficiency of these Hospitals, and are able to report that never have they been so well equipped for the treatment of the sick as at the present time.

In former Reports we ventured to advocate the establishment of a central Pathological and Bacteriological Institute in connection with these Hospitals, which would be devoted to the examination of morbid specimens, and to investigation of the most recent methods of elucidating doubtful zymotic diseases and local epidemics.

We are impressed with a belief in the great public advantage which would accrue from the establishment of such an Institution.

The investigation of the problems of pathology and bacteriology has been of late years universally recognised as indispensable to the understanding of zymotic disease, and to the adoption of the requisite precautions against the invasion of such disease, and it is admitted that, while the opportunity for such investigation in Dublin is ample, the existing means of utilising that opportunity are insufficient.

Such an Institution would be capable of performing valuable service by determining the causes of death—conducting analyses and placing at the disposal of the authorities the highest class of expert evidence on these subjects. As a centre for the teaching of pathology and bacteriology it would prove of infinite assistance to medical education in Ireland, and this Board has no reason to anticipate that the establishment of such an Institution would be attended with serious expense to Government and to the community at large.

The various Statistical and other Tables in Appendices will be found similar in character to those that have hitherto appeared in regular annual sequence, but at the same time indicative of the relative changes and results in the operation of the different institutions.

The financial accounts are rendered on a uniform system, so that it can be seen whether any Hospital is extravagant in its expenditure as compared with others.

On the 1st of April, 1895, there remained 810 patients in these Hospitals under the supervision of our Board.

The number admitted during the year was 9,098, making the whole number under treatment 10,508, of whom 9,141 left the wards either cured or relieved, or were discharged for other causes, and 442 died.

Nine hundred and twenty-five patients remained under treatment in these Hospitals on the 31st March, 1896.

Exclusive of incurables, the mortality was 4 per cent. on those treated to a termination.

The total daily average number of beds occupied in these Hospitals throughout the year was 831.

The time spent in Hospital by each patient under treatment (omitting the patients in the Royal Hospital for Incurables) averaged 22·76 days.

Appendix.—Table No. 1 shows a list of diseases of patients treated in the several Hospitals and the number that died of any particular disease during the year ended 31st March, 1896.

Table No. 2 shows the average cost per bed occupied throughout the year ending 31st March, 1896, for maintenance and for establishment, and for both, exclusive of buildings and furniture.

Table No. 3 shows the several sources of income of each Hospital.

Table No. 4 sets forth in detail the chief heads of expenditure of each Hospital.

Table No. 5 gives the number of patients treated in each Hospital, the mortality per cent, the average daily number of beds occupied during the year, and the present extent of accommodation for each class of patients.

Table No. 6 shows the prices of articles supplied to each Hospital per contract or otherwise.

Table No. 7 gives the various dietaries in use in each Hospital.

Table No. 8 gives the names of the Governors of each Hospital, and number of attendances during the year.

WESTMORLAND LOCK HOSPITAL.

We examined the several departments of this Institution and found the wards and corridors clean, well ventilated, and in good order.

The returns received annually afford evidence that it fulfils in a fair degree the purpose for which it was established, but the extension of contagion would be greatly checked if patients could be induced to seek advice in the early stage of disease. We have ascertained that discipline is well maintained among the patients, and that their requirements are carefully and adequately supplied.

This Hospital was established by Government in 1792 for the treatment of patients of both sexes affected with venereal disease, but a Commission which reported on several Dublin Hospitals in 1820 adverted to some abuses which had arisen in it, and recommended that male patients should not, therefore, be admitted, which recommendation has since been acted on. The Hospital receives no public subsidy beyond the Parliamentary grant, and a sum of £250 annually is given to it by the War Office, although the special purpose of its functions is, perhaps, the most important for which provision can be made, not only for the State, but also for the community at large.

We have been informed that the Roman Catholic and Protestant inmates are regularly attended by their respective chaplains, and we have ascertained that the patients are placed in separate divisions, regulated by the following classification, as recommended by the Hospital Commissioners of 1855, viz. :—

- 1st. Patients admitted for the first time.
- 2nd. Convalescent patients, or those admitted from Asylums.
- 3rd. Married patients.
- 4th. Patients who have been in the Hospital previously.

In a former Report we suggested that it would be desirable if the Hospital could be made less objectionable to patients. We have been informed that they do not seek to be admitted until their disease has become confirmed by delay and neglect, and that unfortunately they too frequently demand their discharge when only convalescent or partially cured.

There were 71 patients in this Institution on the 1st of April, 1895; 416 were admitted, and 11 infants were born in the house during the year; 416 patients were discharged; 5 died; and 77 remained on the 31st March, 1896.

The mortality was 1·18 per cent. on the total number treated to a termination.

The time spent in Hospital by each patient averaged 47·7 days, and the average daily number of beds occupied during the year was 64·96.

STEEVENS'S HOSPITAL.

We are glad to be able to report that on the occasion of our visit all parts of the Hospital were clean and orderly. The requirements of the patients were carefully considered and adequately supplied. The wards were clean and well ventilated, the beds neat and tidy, and provided with white counterpanes. We consider that dark-coloured quilts should be dispensed with in Hospitals, as they do not show the necessity of change when soiled.

The very efficient nursing staff under the Superintendent forms a prominent feature in the working of this Hospital, and continues to deserve the commendation given in our previous Reports. We were pleased to be informed that women, too young or immature, are not encouraged to enter as probationers, as the occupation of nursing can only be borne by those healthy and acclimatised.

During the year 64 new beds and 8 cots for children have been purchased. Wagons for surgical dressings, &c., have been provided, and the arrangements and equipment of glass dust-proof cases in the surgical wards deserve special notice. Glass spittoons and bed urinals of an improved pattern have been substituted for those formerly in use.

We have learned with much satisfaction that contracts have been entered into for the construction of a new Mortuary, a Fever House, and a Dispensary. When these improvements are effected they cannot fail to have a marked beneficial effect on the sanitary condition of the Hospital.

We are of opinion that the reconstruction of the laundry claims the attention of the Governors. The cubic space in the wash-house is deficient, and there is no proper means for the escape of vapour. The operating theatre requires to be furnished with a new set of instruments in air-tight glass cases, also anti-septic basins worked by the foot, lotion bottles in frames, &c., so as to keep the Hospital "up to date" as regards modern anti-septic surgery.

On referring to the Returns received for year ending March, 1895, it will be seen that the large sum of £111 12s. was expended on whiskey and brandy.

On the 1st of April, 1895, 109 remained in Hospital; 1,334 were admitted during the year; 1,273 were discharged; 56 died; and 114 remained on the 31st March, 1896.

The mortality was 4·21 per cent on the total number treated to a termination.

The time spent in Hospital by each patient averaged 26·03 days, and the average daily number of beds occupied during the year was 102·62.

THE MEATH HOSPITAL.

On inspection we were pleased to find every department of this Hospital maintained in an efficient state. We observed, however, that in the male accident ward the beds were all occupied, and in too close proximity. We had on a former occasion pointed out that it would be desirable if possible to have, at all times, a few beds vacant in each ward, so as to permit the bedding to be exposed to air and sunlight, previous to the admission of new cases. For obvious reasons we considered it necessary that at least 100 superficial feet should be allowed for each bed. We trust that funds may soon be available to enable the Governors to provide more extended accommodation.

We visited the new detached wing, for the treatment of infectious cases, which was commenced the previous year. It has made satisfactory progress; and it is expected that it will be out of the contractor's hands early this year. It will contain 40 beds, and is to be provided with all modern improvements, and will be, when ready for the reception of patients, of great advantage to the work of the Hospital.

The corridor in basement of the main building, together with store room, &c., have been floored with tiles at a cost of £78 2s. 3d.

A new hydraulic lift from the kitchen to the top landing has been erected for conveying provisions, coals, &c., to the various landings.

A new roof and glass dome have been constructed over the main staircase at a cost of £200, which appears to be a great improvement, and the old iron railings of the staircase are being replaced by new railings eight inches higher than the old, and so constructed as to give increased width to the stairs.

The store rooms and culinary department are well arranged, we examined the various articles of food and approved of their quality.

The nursing arrangements are well carried out, and the patients whom we interrogated as to the care and attention bestowed on them, invariably gave satisfactory replies.

There were 84 patients in this Hospital at the commencement of the year; 1,334 were admitted; 1,244 discharged; 73 died; and 101 remained on the 31st March, 1896.

The mortality was 5·54 per cent on the total number treated to a termination.

The time spent in Hospital by each patient averaged 22·41 days, and the average daily number of beds occupied during the year was 57·12.

CORK-STREET FEVER HOSPITAL.

Our inspection enables us to report favourably of this Hospital, and we have ascertained that it continues to afford every facility for the prompt admission and treatment of all contagious cases.

The strictest precautions are adopted in segregating patients suffering from small-pox, scarlatina, typhus, and measles, &c., each division has its own establishment of nurses and ward-maids, who all wear uniforms that can be, and are frequently washed.

The Governors are of opinion that the statements as to the spread of contagion to the surrounding district on account of the vicinity of the Hospital have not been substantiated. We have been assured that no relatives of the staff employed in the Hospital were treated for small-pox during the last epidemic.

The patients receive every necessary care and attention, and the several articles of food which we examined were of good quality.

Since our last visit the walls of the staircase, passages and closets of the Fever House have been plastered with the best cement, and the wards have been fitted with new Crosthwaite grates.

The whole woodwork and interior of the Epidemic House has been disinfected and painted.

In order to extend the sphere of usefulness of the Hospital as a training school for fever nursing, the Managing Committee have made arrangements with the Barrington Hospital, Limerick, to receive probationers for three months on the same conditions as the nurses for Jervis-street, St. Vincent, and Steevens's Hospitals.

At the commencement of the year 82 patients remained in the Hospital; 1,090 were admitted; 1,055 were discharged; 97 died; 120 remained on the 31st March, 1890.

The mortality was 8·42 per cent. on those treated to a termination. The average daily number of beds occupied was 99·55 and the time spent in Hospital by each patient averaged 28·64 days.

HOUSE OF INDUSTRY HOSPITALS.

The management of this institution is characterised by marked efficiency in every department. The wards appeared bright and cheerful, and the Nurses' Home, which we inspected, is a model of neatness and comfort.

The patients are well cared and the various articles of food which we examined were of good quality, and the cooking satisfactory.

Prescription and diet cards, together with the history of the case properly filled up, are kept over each bed, by which means accurate and immediate information is obtained of the patient under treatment.

The financial returns, which we examined, testify to the care

bestowed in the disbursements of all funds. We were much pleased with the system of keeping accounts, especially with the financial comparisons prepared by the Secretary—who appears to be a most efficient officer—by which means the Governors are enabled to note the increase or decrease in expenditure, and to observe the special head under which such occurs.

We are glad to learn that the entire space in the vicinity formerly occupied by dairy yards, has been purchased by the Board of Governors, and that plans are in course of preparation for the erection of a new Hospital, on the most improved modern principles.

The Auxiliary Hospital, in which Small-pox patients were treated, during the recent epidemic, was on the day of inspection undergoing a complete process of disinfection, and the Hardwicke Hospital was occupied by a number of fever patients.

Richmond Hospital.

There were 55 patients in this Hospital when the year commenced; 713 were admitted; 674 were discharged; 26 died; giving a mortality of 3·71 per cent.; 700 cases treated to a termination.

The average daily number of beds occupied in the year was 57·50; and the time spent in Hospital by each patient averaged 22·16 days.

Hardwicke Hospital.

Eighteen patients remained in this Hospital on the 1st of April, 1895; 497 were admitted during the year; 416 were discharged; 53 died; giving a mortality of 11·3 per cent. on 489, the total number of cases treated to a termination.

The average daily number of beds occupied during the year was 33·90, and the time spent in Hospital by each patient averaged 21·07 days.

Whiteworth Hospital.

On the 1st of April, 1895, 48 patients remained in Hospital; 596 were admitted; 557 were discharged; 43 died; giving a mortality of 7·21 per cent. on the total number of cases treated to a termination.

The average daily number of beds occupied throughout the year was 40·10; and the time spent in Hospital by each patient under treatment averaged 23·65 days.

ROTUNDA LYING-IN HOSPITAL.

This Hospital continues to maintain its high position, and bears evidence of being conducted with much administrative ability. The patients derive all the advantages which can be conferred on them by skilful medical treatment, and careful nursing.

On inspection we found the Institution thoroughly clean and in good order.

We inspected with much gratification The Cairnes' Wing of Auxiliary Hospital recently erected. It consists of a spacious

three-storied building, the floors being on the same level as those of the main building, and connected with them by lofty and well-ventilated corridors. Upon the ground floor are rooms for out-patients, compounding department, pay wards, sitting-rooms for nurses, and sleeping accommodation for servants. A handsome stone staircase leads to the upper floors, upon the first of which is placed the Hospital for the treatment of diseases peculiar to women. At either end are two large wards containing each sixteen beds, joined by a corridor upon either side of which are situated a small ward for special cases, anaesthetising room, a ward kitchen, an examination room, and an operating theatre. The top floor provides sleeping accommodation for about 40 nurses. Each pupil nurse has a separate cubicle, the staff nurses private rooms, and there are special dormitories for the nurses on night duty. In two separate buildings, but connected by well-ventilated corridors are the sanitary appliances, bath rooms, apartments for storing patients' clothing, a shoot for soiled linen, an observation ward and a commodious lift. It appeared to us that this building has been admirably designed to provide light and perfect ventilation; and with the view of ensuring cleanliness all rough angles have been rounded off, and all pipes left exposed.

A special feature of the Hospital is the operating theatre, which has been placed on the northern side, so as to secure the best and steadiest light. The chief peculiarity in its construction is a large plate glass screen which divides it into two distinct parts—the spectators being separated from that part of the theatre in which operations are performed—thus preserving the air from contamination, and preventing draughts which might contain organic germs.

The atmosphere in the part reserved for operating is maintained at a temperature of 76° Fahr., a matter of great importance in preserving the vitality of a patient during the performance of a prolonged operation. The operating theatre is equipped with the most modern appliances for sterilizing clothing, linen, instruments, water, &c., used during operations. The arrangement of this theatre, though a complete novelty in this country, has fully realised the expectations of the medical staff, and the entire building seems to be admirably suited to the objects for which it has been designed.

We were not quite satisfied with the post-mortem room, it was clean and in order, but not sufficiently large and in too close proximity to the Hospital. We have at all times pointed out that this important department should be sufficiently spacious, with the most approved means of renewing the atmosphere; otherwise persons who attend at autopsies are liable to carry infection in their clothes, hands, and hair from emanations from the dead, a fruitful and unsuspected source of the spread of disease. We were informed, however, that no student who attends the labour-wards is allowed to be present at post-mortem examinations.

On the 1st of April, 1895, there were 29 patients in the labour wards; 1,619 were admitted during the year; 1,361 were discharged after delivery; 283 were discharged, not having been

delivered; 4 died; and 44 remained in the Hospital at the end of the year.

Twenty-eight patients remained in the auxiliary or chronic department on the 1st of April, 1895; 510 were admitted; 485 discharged; 16 died in the year ended 31st March, 1896; and 37 then remained.

The average daily number of beds occupied throughout the year by labour cases was 36·78, and that of the chronic class 32·81.

The time spent in Hospital by labour cases averaged 8·17 days, and that by the chronic class 22·30 days.

The mortality in the labour wards, deducting non-parturient cases, was 0·30 per cent, and that of the chronic class 3·19 per cent.

COOMBE LYING-IN HOSPITAL.

This charitable and useful Hospital, situated in a poor and densely-populated district, merits support on account of the benefit it renders the poor, and also for the advantages it affords in forwarding medical education; it presents every appearance of being under able and conscientious management.

On inspection the wards were clean, orderly, and well ventilated. The nursing arrangements and the care of the patients are such as to meet with approval.

We were glad to perceive that the floors throughout the Hospital were stained and polished, which renders frequent washing unnecessary. We retain the opinion that old floors can be much improved by two or three coats of paint, and by filling up the seams so as to insure an impervious surface. By this arrangement the danger of dampness entering the cracks in the wood, and converting them into receptacles for the germs of disease are avoided. We have ascertained that as far as possible all anti-septic means are adopted for the safety of the patients, and that the sewers of the Hospital have been tested and found in order. It has, however, been reported to us that on several occasions during the year the basement of the building was flooded by an overflow of the contaminated Poddle river, a branch of which runs in front of the Hospital. That lying-in women should be exposed to this danger is shocking to contemplate, and it is to be hoped that the Dublin Corporation may soon be in a position to carry out the Main Drainage Scheme which would have the effect of preventing the recurrence of such a deplorable condition.

We trust that funds may soon be available for the reconstruction of the culinary department, which is deficient in light, and exhibits the primitive appearance of a past date. Amongst other matters calling for attention we recommend that the "Notice as to anti-septic precautions to be taken," and which is hung up in the students' room, should be relettered.

Thirteen labour patients remained in Hospital on the 1st of April, 1895; 462 were admitted during the year; 391 were discharged; 70 were discharged not having been delivered; 3 died; and 11 remained at the close of the year.

Sixteen patients remained in the chronic wards on the 1st April, 1895; 256 were admitted; 255 were discharged; 4 died; and 13 remained at the close of the year.

The average daily number of beds occupied throughout the year by labour cases was 10·84, and by chronic cases 1·33.

The time spent in Hospital by labour patients averaged 8·33 days, and that by the chronic class 10·34 days.

The mortality of patients admitted to the labour wards, deducting 70 that were discharged not having been delivered, was 0·76 per cent., and for the chronic class 4 died, giving a mortality of 1·54 per cent.

THE ROYAL HOSPITAL FOR INCURABLES.

On visiting the several departments of this Institution we were much pleased with the order, regularity, and cleanliness which prevailed.

The wards were decorated by a profusion of beautiful plants, which presented a bright and cheerful appearance.

The storerooms and culinary departments are well arranged, and the provisions were of good quality.

The present nursing arrangements are in the hands of a Superintendent recently appointed, and four staff nurses fully certificated, three for day, and one for night duty.

The Governors are entitled to great credit for their persevering energy in maintaining this deserving charity.

On the occasion of our visit a complaint was made to us as to a new rule which had been established prohibiting dinners to be served in the house after 12·30 p.m., an hour so early that patients who are able to avail themselves of the privilege of going out to visit their friends on certain days of the week, from 8 a.m. to 3 p.m., are practically precluded from getting back in time. Formerly the dinners were kept over and given to the patients either cold or hot on their return to the house.

We have, however, since been informed that the Managing Committee have modified this rule, to the effect that patients going to places of worship on Sundays would on leaving their names with the Lady Superintendent have dinners kept for them till 1·30 p.m.

We do not wish to express any decided opinion respecting this matter, but, as the Institution is more a permanent home than a general Hospital for victims of hopeless diseases, we feel sure that the Managing Committee will not enforce any stringent discipline, but will continue to make every effort to alleviate the mental as well as the physical sufferings of the patients.

Two hundred and ten patients remained in Hospital on 1st of April, 1895; 73 cases were admitted; 21 were discharged; 60 died during the year; and 202 remained on the 31st March, 1896.

The mortality was 74·07 per cent. on the total number of cases treated to a termination.

The time spent in Hospital by each patient averaged 262 days.

The average daily number of beds occupied throughout the year was 202·58.

ST. MARK'S OPHTHALMIC HOSPITAL.

This important and useful Institution was opened by Mr. Wilde, in 1844, for patients affected with diseases of the eye and ear. It has been efficiently worked since that period, as far as circumstances would admit, and it has maintained its high reputation for teaching.

On inspection we found the wards clean and well ordered, and the patients treated with all the care and attention which their condition requires.

The structural defects of the building and the want of adequate accommodation which we have repeatedly adverted to have to a great extent impeded the proper working of the Institution.

We hope that funds may soon be available to enable the authorities to carry out the projected Scheme of the amalgamation of this Hospital with the National Eye and Ear Infirmary, so that a new and enlarged Hospital may be built worthy of the Metropolis of Ireland.

There can be little doubt that the concentration of the Dublin Ophthalmic and Aural Surgery in one institution will be for the benefit of the patients, and for the advantage of medical teaching.

On the 1st of April, 1893, 47 patients were in Hospital; 687 were admitted during the year; 684 were discharged; 2 died, and then 48 remained.

The average daily number of beds occupied in Hospital was 46·95, and the time spent in Hospital by each patient averaged 23·41 days.

The mortality was 0·29 on the cases treated to a termination.

Dublin Castle,
3rd June, 1896.

SIR,

I have to acknowledge the receipt of your letter of the 2nd instant, forwarding, for submission to His Excellency the Lord Lieutenant, the Thirty-eighth Annual Report of the Board of Superintendence of the Dublin Hospitals.

I am, Sir,

Your obedient Servant,

D. HARREL.

The Secretary,
Board of Superintendence of
the Dublin Hospitals.
